

Managed Internet from SOLUTION IP

These days any business needs a fast, dependable internet connection. There are many different applications and processes that rely on connectivity, from email, e-commerce, supporting remote and mobile workers, long distance conference calling, media streaming and web browsing. For those companies also wishing to update their telephony to an IP based system, a robust and reliable connection is a must.

Our Managed Internet services ensure that your business is set up with the right connection type for your business needs.

Leased Lines

A Leased Line is a high-performance permanent connection from your premises to the internet network.

It is a dedicated, private line and only carries communications such as voice, data and internet traffic from your company, which means you don't have to share your bandwidth with any other companies or residential users. This, coupled with the guaranteed level of service that accompanies a Leased Line, means it is a reliable choice for businesses who are also looking for a solid infrastructure to help them grow and maintain service quality.

High speed connections up to 10Gigs are available.

If Broadband connectivity is mission-critical to your business then a leased line is the most reliable, dedicated connection available to you.

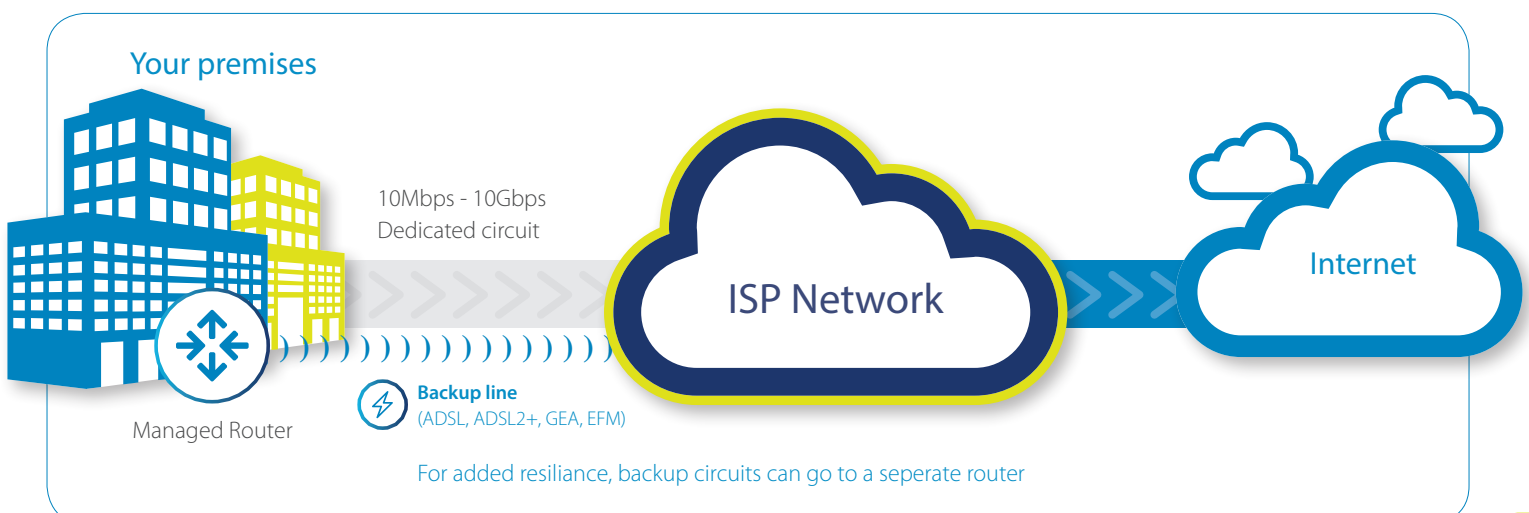

We offer a 100% Service Level Agreement (SLA) in the form of backup connectivity, supported on a 24/7 basis by our expert engineers.

Leased lines are scalable, flexible solutions for businesses who are in the process of expanding their operations- there are a range of different bandwidth options for scalability also available.

Key Features:

- **Dedicated, high performance connection**
- **Speeds of up to 10 GBPs**
- **Flexible: bandwidth can be increased as demanded**
- **100% SLA and backup connectivity is provided**
- **24/7 technical support**

How does it work?

Ethernet in the First Mile (EFM)

EFM is a reliable and uncontended connection type. It can deliver speeds of between 2MBPs to 35 MBPs, and can represent a cost-effective alternative to a Leased Line for those businesses looking for a dedicated connection.

The number of copper pairs used depends on several factors such as the distance between your business and the nearest serving exchange. Using multiple bonded copper lines like this means that if one pair fails, your connection will still be operational, until the issue has been resolved.

Our EFM solutions also come with comprehensive SLAs, with 24/7 support available in the unlikely event of any connection failure.

EFM is well suited to organisations or companies that want much greater reliability in their connection at an affordable price. An affordable Ethernet solution can also help with the adoption of cloud hosted services, and IP based voice and data.

Key Features:

- **Uncontended (1:1 Contention)**
- **2MBPs to 35 MBPs**
- **Cost effective**
- **Quick to install**
- **Private and secure connection**
- **Viable alternative to Leased Line**
- **100% SLA**
- **24/7 technical support**
