# Managed private wide area networks [PWAN] across the UK

Solution IP helps organisations meet the challenges of productivity and collaboration whilst aligning technology to their growth strategies. We work with industry-leading technology partners, adding a full-service wrap to deliver networks, IT, unified communications and security that simplifies seamless communication and collaboration.

Accredited by:

Why do I need enterprise-grade WAN?

If you're finding broadband or ethernet aren't meeting your speed and resilience requirements, dynamic routing through private WANs is a well-recognised next step.

WAN architecture that works through a centralised platform, detaching the management of the network from the hardware itself and then steering traffic across the WAN in an intelligent way. It allows you to connect your users to the data and applications they need wherever they are.

MPLS - Your data. Better secured.

Get more control and visibility of your data with fast, secure, easy access to the cloud and industry leading managed security service. It's multiple layers of routing which provides you with traffic prioritisation. We manage your private network to optimise your network to meet your technology and teams needs.

Simplify your current infrastructure to accelerate digital transformation, making the most of your cloud technology.

Move fast without losing control
Scale fast and quickly create new customer touchpoints, giving your team the speeds and resilience, they need.

Improve your customer experience
Prioritise business-critical apps, collect data and share insights, in real-time, to enable frictionless customer experiences.

Empower productivity
Connect all your sites and devices securely and efficiently, so staff can work flexibly from anywhere.

Inspire employee engagement
Give people a workplace technology experience to meets their needs.

SD-WAN - Your data. Optimised routing built-in.

SD-WAN is a WAN architecture that works through a centralised platform detaching the management of the network from the hardware itself and then steering traffic across the WAN in an intelligent way. SDWAN when people want greater analytics, bandwidth on a per device basis and application steering, It allows you to connect your users to the data and applications they need wherever they are.

Features:
- Reduce WAN costs by consolidating disparate point products and enabling broadband augmentation without compromising security.
- Enhances application experience via faster cloud on-ramp connectivity and prioritising business-critical applications.
- Reduce complexity by shrinking deployment time from weeks to minutes with zero-touch deployment and centralised management for Network and Security Operations.
- Reporting capabilities are improved.

SASE - the next big thing for WAN in 2021/2022?

Secure Access Service Edge (SASE) is a new enterprise networking technology.

SASE converges the functions of network and security point solutions into a unified, global cloud-native service. It is an architectural transformation of enterprise networking and security that enables IT to provide a holistic, agile and adaptable service to the digital business.

What makes SASE unique is its transformational impact across multiple IT domains, mitigating the constraints of SDWAN boxes.

Solving emerging business challenges with point solutions leads to technical silos that are complex and costly to own and manage.

SASE changes this paradigm through a new networking and security platform that is identity-driven, cloud-native, globally distributed, and securely connects all edges (WAN, cloud, mobile, and IoT).

Why WAN from Solution IP?

·Very adaptive: highly customisable solutions form multiple vendors

· Flexible and scalable from SME to enterprise grade solutions

·End-to-end solution - from network health- checks - from cloud-based applications used, demands in connectivity, data backup , hosted telephony.

·Solution IP own engineers - we invest, support and train on your behalf and always have the latest accreditations

·Backed by award-wining vendors' leading products– with proven communications capabilities

·Solution IP were awarded Gamma Platinum Partner in 2020 (https://www.gamma.co.uk/partners/find-a-partner/)

What are our MPLS and SD WAN solutions?

A fully-managed network service with 24/7 automated monitoring with on-call network engineers across the UK.

 End to end network design across both voice and data utilising award-winning security and Carriers.

The ability to define your own service propositions
- Value-added capabilities like firewalls and cloud

Ask your Account Manager for a personalised quote.

Simple, easy-to-understand pricing

As your teams' requirements and features can be different across your environment, we have simplified pricing and licensing options to choose from:

- Prices can be based on a total estate basis or fixed charge for different sized sites to make budgeting and cost control easier
- Integrated with enterprise grade network security firewall management
- Bundled with end point protection - antivirus protection against all types of viruses, malware and ransomware
- Connectivity only
- Hybrid network with local firewalls and firewalls in the core
- Cloud transformation - taking operations into hosted environments.

Ask your Account Manager for a personalised quote.

Adoption & Integrations

Because Solution IP deploy and run multiple voice, IT, data and network services, we are ideal partners for change management.

Adopting network changes without consideration for failovers, cloud adoption plans and branch requirements can lead to budget overspend or inadequate provisioning.

 We have established change management procedures to ensure minimum downtime, predictable switchovers and increased business continuity security.

Let us help you
Not all businesses have the expertise to manage their UCaaS.

 Solution IP will support your team with independent advice and solutions from our expansive unified communications, IT, security and network portfolio structured and designed to solve your business challenges.

With 5* independently-rated support from our skilled in-house engineers alongside a compelling offering to create the right solution, we will be happy to help.
